

EZ-Tear™ Makes Packing Easy & Efficient

AirPouch® air pillows and FastWrap™ packing tubes feature our patented EZ-Tear™ perforations, which require 80% less effort to pull and separate than similar packing materials. Wrapping and packing is faster and more efficient with EZ-Tear materials.

EZ-Tear makes it easy for packers to quickly tear off the exact amount of material they need for faster packing productivity. A pre-opened slit between each pillow and tube allows the operator to easily grasp the material and separate any amount of pillows or tubes.

A Better Packing Option

AirPouch EZ-Tear pillows provide excellent protection, increased product visibility, and reduced shipping costs when compared to conventional protective packaging materials. The EZ-Tear perforation allows more air into each pillow, which maximizes yield and minimizes cost per cubic foot.

Standard EarthAware® biodegradable* and recycled materials are tinted green to show your customers you care about the environment.

Testing Proves It!

A third party testing company evaluated products from the top four protective packaging manufacturers to determine the amount of pull force needed to separate air pillows across the entire width.

Results

AirPouch:
5.84 lbs. force

Competitor #1:
14.11 lbs. force

Competitor #2:
14.11 lbs. force

Competitor #3:
23.60 lbs. force
