

## Add shelf appeal, highlight a special promotion or add a coupon to your product with AutoSleeve Stretch Sleeve Labels

AutoSleeve Stretch Sleeves feature full 360° print coverage. We offer up to 10-color flexographic printing, specialty and metallic inks. Sleeves are moisture-proof and have a high resistance to light and temperature for a long lasting shelf appeal.

Heat or glue is not needed to seal these sleeves, making them easy to apply using most standard sleeving systems. They are held in place by the natural elastic properties of polyethylene.

Labels can be used for a variety of applications and container sizes. Our in-house graphics team can help you create an eye-catching design for your label. We also offer digital sleeve mock-ups to ensure your satisfaction.

AutoSleeve Stretch Sleeves are made from LDPE or LLDPE and are 100% recyclable. They are available in clear or white opaque, extruded in 2, 3 or 4 mil.

### Our Difference

AutoSleeve has a proprietary seaming process for higher efficiency and maximum uptime. Unlike most competitors, Automated Packaging Systems extrudes, prints and converts our films from raw resin in our multiple U.S.-based plants to guarantee a high-quality product.
